Education

Universidad de Ingeniería y Tecnología (UTEC) Lima, Peru
B.S. in Computer Science Apr 2024 – Present

Projects and Experience

SanaFlow — Event-Driven Serverless Intelligent Triage Platform *Serverless, AWS, Groq, React.js*
Cloud & Full-Stack Engineer Jul 2026

- Architected a resilient pipeline using AWS SQS and Lambda for high-throughput clinical note processing via Llama 3 with automated retries to mitigate rate limits (HTTP 429 errors).
- Developed a React dashboard utilizing API Gateway WebSockets for real-time streaming of triage data to DynamoDB, eliminating cyclical HTTP polling.

MrSushi — Multi-Tenant Serverless Order Management System *AWS Step Functions, EventBridge, DynamoDB*
Software and Cloud Architect Jul 2026

- Designed a serverless system on AWS using Step Functions with Task Token callbacks to orchestrate order states without incurring idle compute costs.
- Implemented an event bus in EventBridge to decouple client-facing APIs from a role-based operational panel featuring a real-time interactive Kanban interface.

MedSimulatorAI — Multi-Agent Clinical Case Simulator with Hybrid RAG *Python, FastAPI, Next.js, PostgreSQL/pgvector, Claude API*
Software & AI Engineer Jun 2026

- Designed a multi-agent architecture (virtual patient, consulting specialist, evaluating tutor) orchestrating Claude, Groq, and OpenRouter with a custom API abstraction layer; the tutor evaluates asynchronously with structured outputs (Pydantic) outside the synchronous loop, reducing latency and per-session costs.
- Built a hybrid RAG pipeline (BM25 + pgvector + reranking) scoped per clinical case using arrays/GIN in PostgreSQL, leveraging Anthropic Citations and prompt caching to validate dosages and diagnostic criteria against a corpus ingested via Docling, OCR, and multimodal vision.

FinTrend AI — Microservices-Based Data Pipeline and Financial Analytics *AWS Glue, Athena, S3, CloudFormation*
Lead Full-Stack, Cloud & Data Engineer Apr 2026

- Built an end-to-end serverless data pipeline with AWS Glue to automate ETL workflows, run structured queries via Athena, and provision Infrastructure as Code (IaC) with CloudFormation.
- Developed a containerized microservices architecture using Flask, Spring Boot, and Express.js to integrate the analytical data lake with a financial monitoring dashboard featuring OpenRouter-powered predictions and a Groq-based chatbot.

Technical Skills and Interests

Languages: C++, Python, Go, Java, JavaScript, TypeScript, SQL.
Libraries & Frameworks: React.js, Next.js, Node.js, Spring Boot, Flask, FastAPI, Express.js.
Cloud & Infrastructure: AWS (Serverless Architecture, Event-Driven Architecture, Microservices), GCP, Cloudflare, Vercel, Docker, Nginx, CI/CD (Jenkins).
Databases: PostgreSQL, MySQL, SQLite, MongoDB, DynamoDB, pgvector, Qdrant, Supabase.
AI / LLMs: Claude, Cursor, Antigravity, Hybrid RAG (BM25 + vector, reranking), n8n, Docling, LlamaIndex, LangChain, LangGraph, Pydantic.
Tools & Workflow: Git, GitHub, Postman, Agentic Development (CLI Agents, SKILLS.MD).
