Education

Universidad de Ingeniería y Tecnología (UTEC)
Bachelor of Science in Computer Science

Lima, Peru
Apr 2024 – Present

Projects and Experience

SanaFlow — Serverless & Event-Driven Intelligent Triage Platform *Serverless Framework, AWS, Groq, React.js*

Cloud & Full-Stack Engineer Jul 2026

- Architected a resilient, event-driven pipeline using AWS SQS and Lambda to mass-process clinical notes via Llama 3, implementing automated retries to handle rate limits (429 errors).
- Developed a data-driven React dashboard integrated with API Gateway WebSockets for real-time triage data streaming to DynamoDB, completely eliminating HTTP polling.

FinTrend AI — Microservices-Based Data Pipeline & Financial Analytics *AWS Glue, Athena, S3, CloudFormation*

Core Full-Stack, Cloud & Data Engineer Apr 2026

- Built an end-to-end serverless data pipeline with AWS Glue to automate ETL workflows, structured queries via Athena, and deployed Infrastructure as Code (IaC) using CloudFormation.
- Developed a containerized microservices architecture using Flask, Spring Boot, Express.js, and React.js to connect the analytical data lake with a dynamic financial tracking dashboard.

FraudNet Intelligence — C++ Neural Network Fraud Detection Engine *C++, Node.js, Express.js, React.js, Vite*

Systems & ML Engineer Jun 2026

- Built a Multi-Layer Perceptron ($30 \rightarrow 16 \rightarrow 8 \rightarrow 1$) from scratch in C++ using custom linear algebra tensors, gradient descent, and custom CSV preprocessors to handle Kaggle's PCA fraud dataset.
- Connected the C++ inference engine to an Express.js Bridge API and a real-time React/Vite dashboard, enabling real-time transaction injection and side-by-side model epoch comparison.

MrSushi — Serverless Multi-Tenant Order Management System *AWS Step Functions, EventBridge, Lambda, DynamoDB, React*

Cloud & Software Architect Jul 2026

- Architected an event-driven serverless system on AWS using Step Functions with Task Token callbacks to orchestrate order states without incurring idle compute costs.
- Implemented an EventBridge event bus to decouple client-facing APIs from a role-based operational dashboard featuring a real-time drag-and-drop Kanban interface.

Technical Skills and Interests

Languages: C++, Python, Go, Java, JavaScript, TypeScript, SQL.

Libraries and Frameworks: React.js, Next.js, Node.js, Spring Boot, Flask, FastAPI, Express.js.

Cloud and Infrastructure: GCP, AWS (S3, Glue, Athena, API Gateway, EC2, SQS, SNS, Step Functions, Lambda, CloudFormation), Serverless Architecture, Event-Driven Architecture, Microservices Architecture, Docker.

Databases: PostgreSQL, MySQL, SQLite, MongoDB, DynamoDB.

Tools and Workflow: Git, GitHub, Postman, Agentic Development (MCP, SKILLS.MD, CLI Agents, AI IDEs).

Interests: Artificial Intelligence Engineering, Software Engineering, Systems Optimization, Cloud-Native Infrastructure.
